

CATCH DELIVERY DELAYS BEFORE YOUR CUSTOMER DOES.

Your team already
handles the unexpected.
What if you heard first?

Delays start small. **Swipe to see
where.**

Delays happen. Who hears first?

Between the port, the highway and the ghat roads, small slips start in four places.

Here's where:

1 Pickup

2 In transit

3 Arrival time

4 The update

1/4 · PICKUP

Pickup missed?

Nobody notices until the slot is gone.

What if it was flagged the moment it happened?

✓ Caught early

✓ Time to re-plan

2/4 · IN TRANSIT

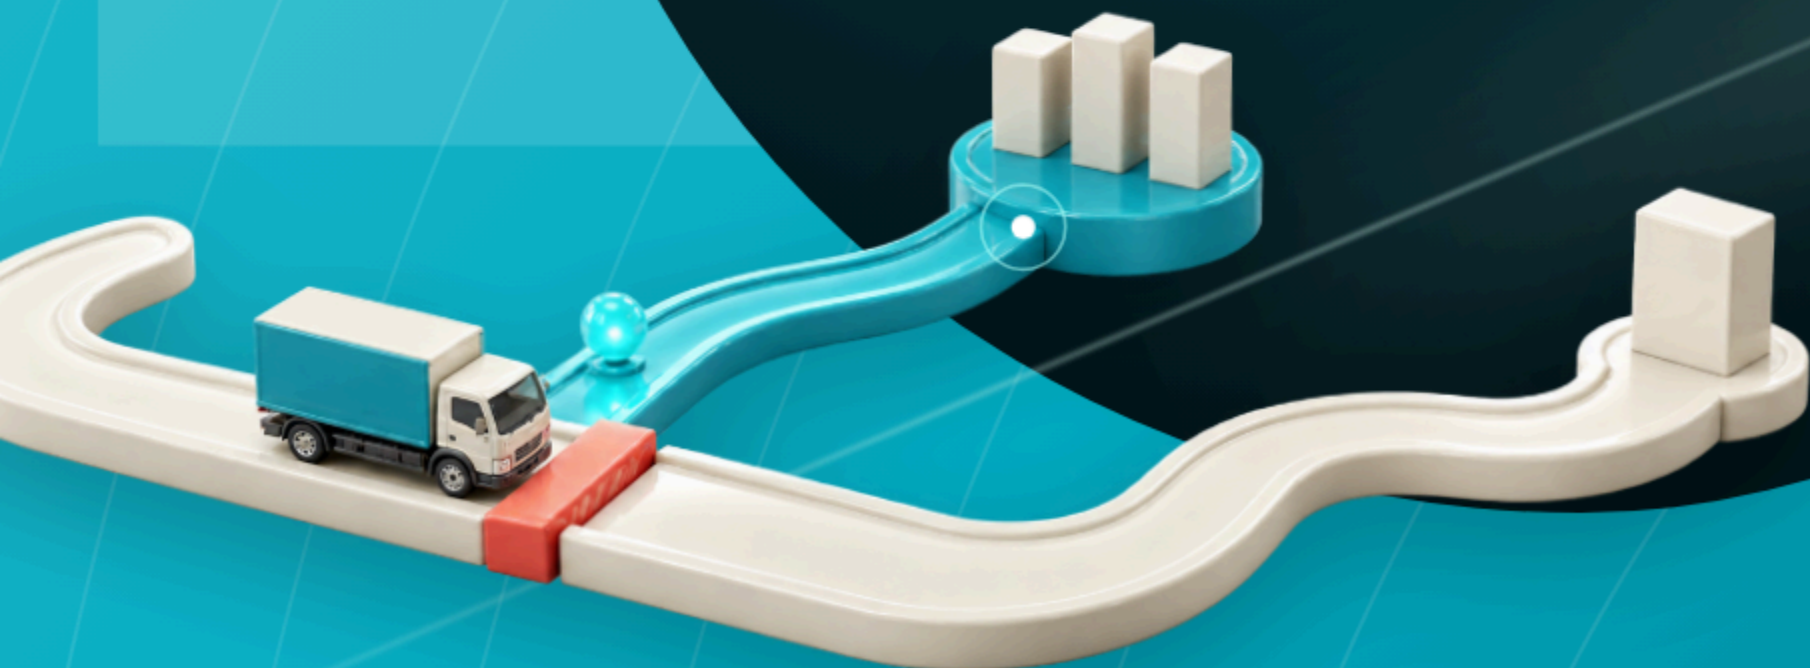

Shipment gone quiet?

You find out when someone asks.

How about a nudge the moment it stalls?

✓ No silent stalls

✓ Details ready

3/4 · ARRIVAL TIME

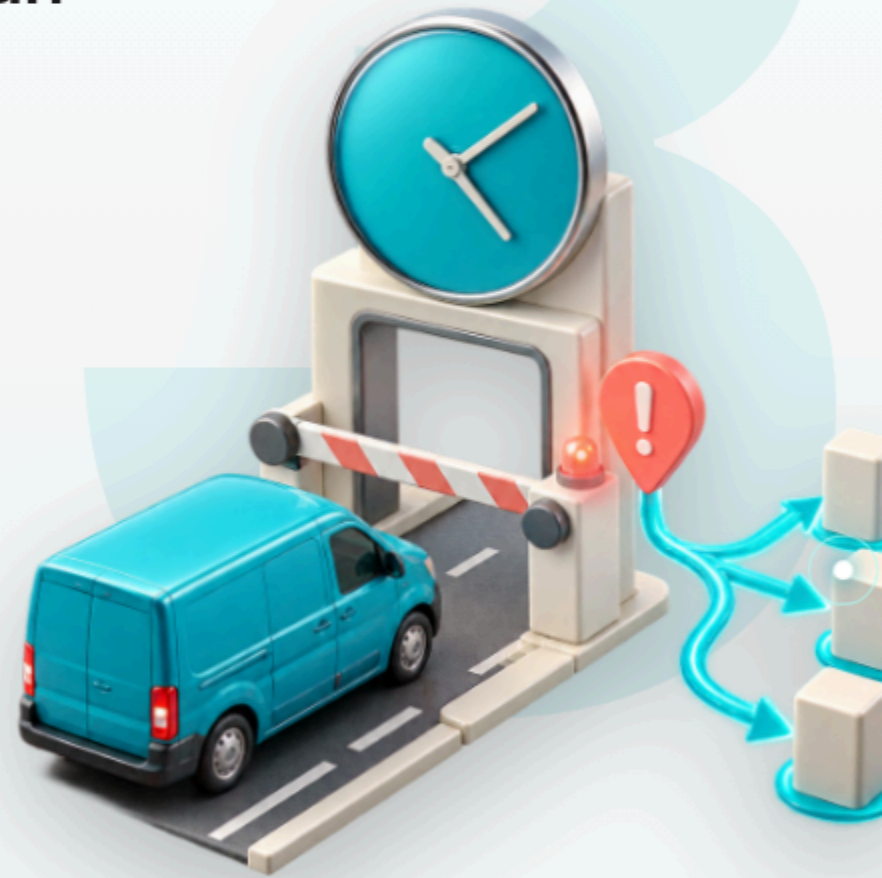

Arrival time slipping?

One slow checkpoint, and the promise quietly moves.

Imagine knowing early enough to plan around it.

✓ Plans that adjust

✓ Promises kept

ARRIVAL

4/4 · THE UPDATE

Who tells the customer **first**?

News from anyone else makes a small delay feel big.

What if you heard first, and chose what they hear?

✓ You speak first

✓ Trust intact

A
REALTIME
TECH

Your team already handles delays well. What if you always heard first?

That's where [ART \(A Realtime Tech\)](#) comes in. Aiotrix's Governed Automation Platform sits on top of the systems you already use and flags a slip the moment it starts. You decide who hears and what your customer is told.

Your customer hears it from you, first.

From a Mangaluru team that knows the ghat roads too.

Delays still happen. Surprises don't.

- ✓ Missed pickups caught
- ✓ Stalled shipments flagged
- ✓ Arrival times you can plan around
- ✓ Customers who hear it from you

And a reputation that holds.

Who hears about a delay first?

Your team, or your customer? Tell us below.

DM us to see how early you could know.

Save this for your next ops meeting.
