7 CALLS.

ONE CONTAINER.

EVERY LOOSE END LANDS ON YOU.

Checking details.
Relaying changes.
Chasing confirmations.

The coordination becomes your second job.

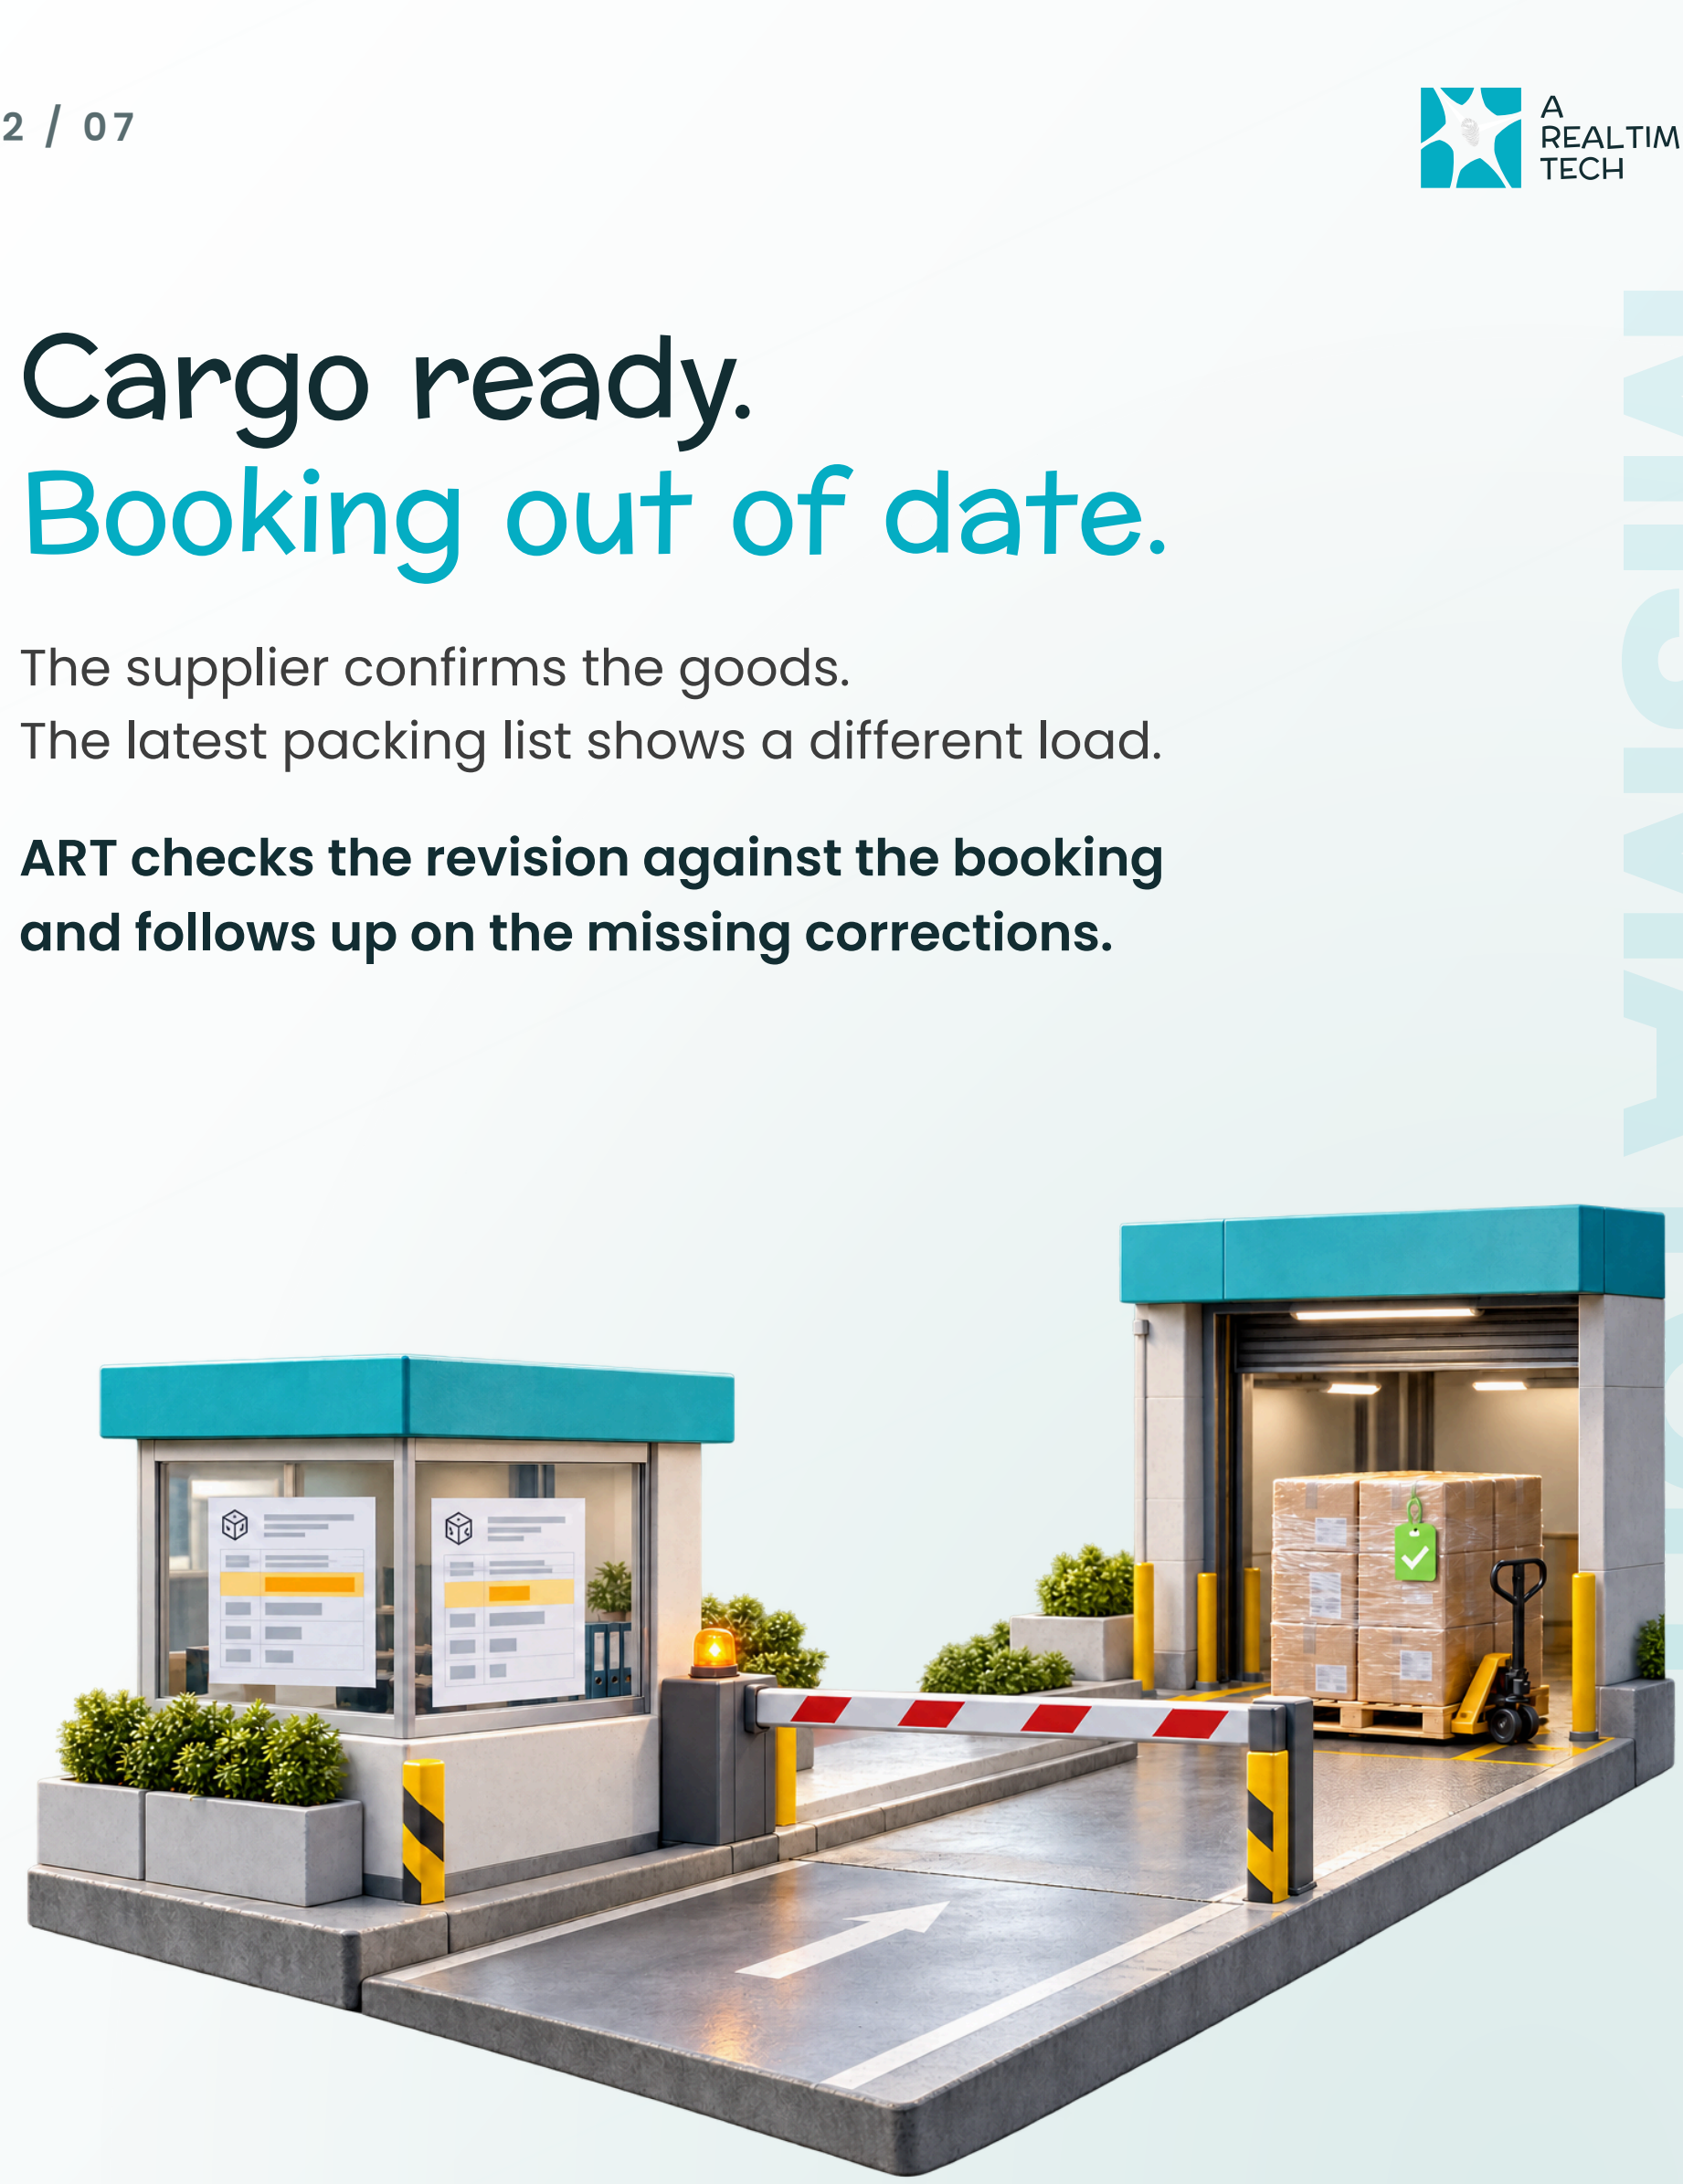

A REALTIME TECH

Cargo ready.
Booking out of date.

The supplier confirms the goods.
The latest packing list shows a different load.

ART checks the revision against the booking and follows up on the missing corrections.

The load changed.
The rest of the plan didn't.

More cargo can change vehicle capacity,
pickup arrangements and shipping instructions.

**ART identifies what the revision affects
and coordinates the required updates.**

Truck at **4 PM.**

Loading closes at **3 PM.**

Both teams confirmed. The handoff still fails.

ART checks the timings together and seeks a pickup that meets the loading window.

Your next call should be a decision.

Keep the cutoff with a costlier pickup—or take the later departure?

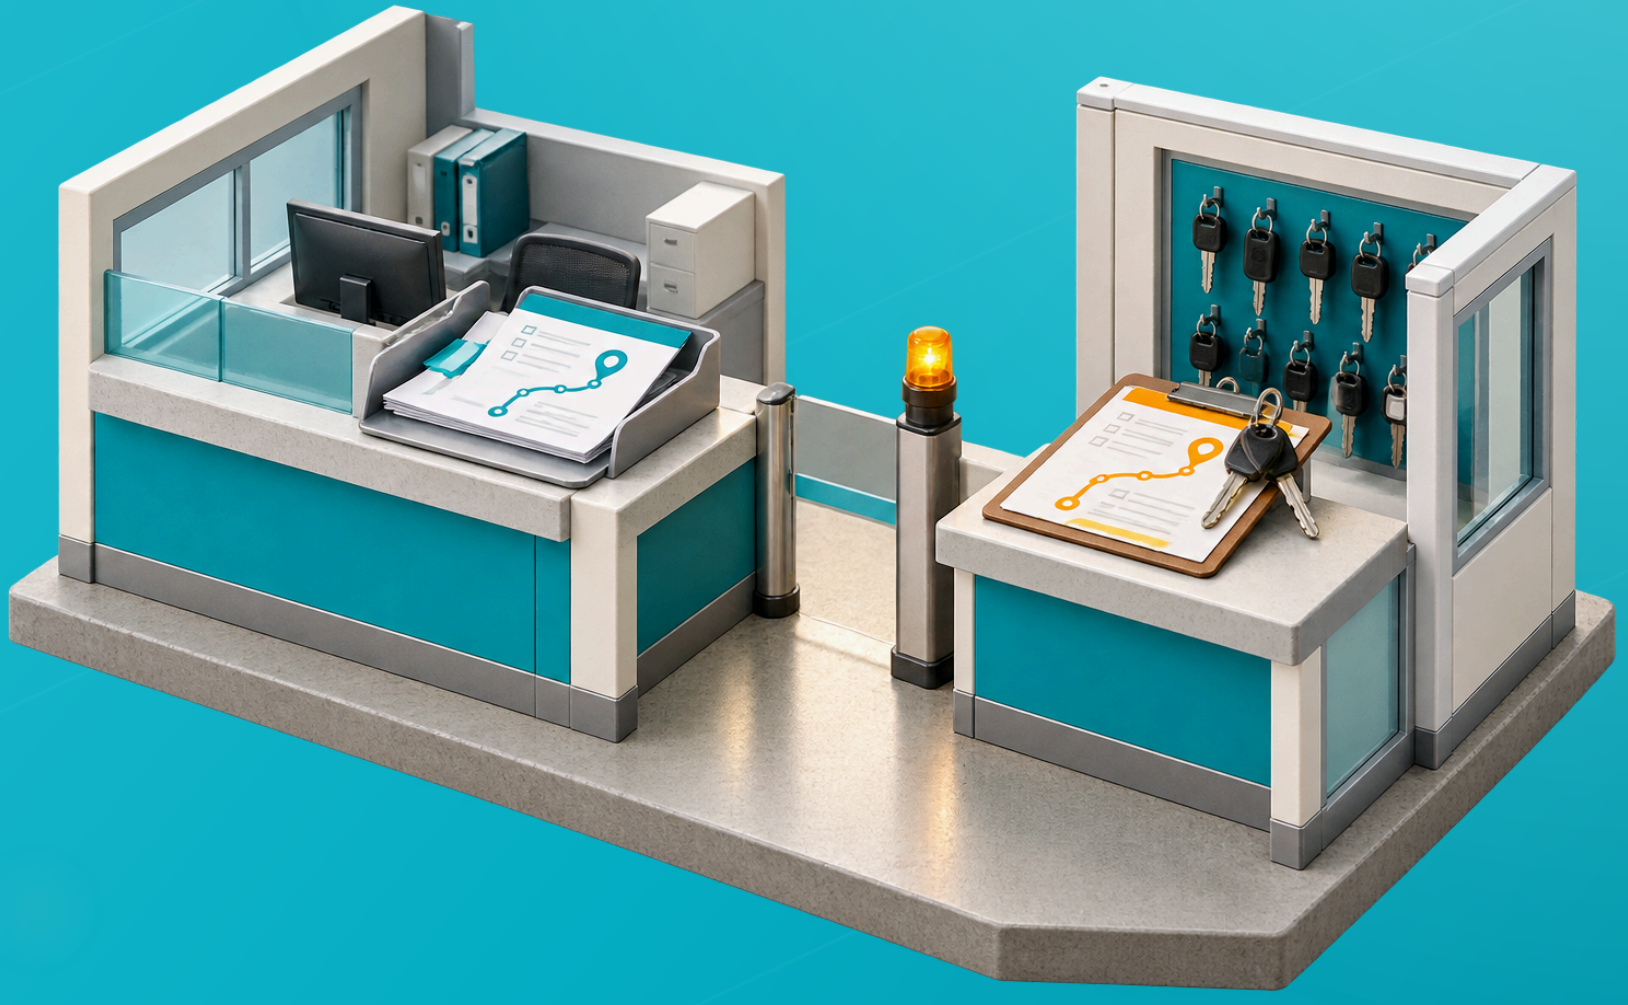

ART brings the options, cost and timing impact together. Decisions outside your rules reach you with context.

A new plan only works when someone acts on it.

The revised pickup is sent.
The transporter still has the old instruction.

ART checks acknowledgment and follows the required action through.

Revised pickup
2 PM

Still with transporter
4 PM

A REALTIME TECH

Move the container.
Get your day back.

ART checks what changed, coordinates what follows and brings the decisions that need you.

DM “CONTAINER”
