7 CALLS BEHIND ONE CONTAINER.

And you're still piecing together the answer.

The shipment has a plan. Keeping everyone on that plan becomes your job.

Meet A REALTIME TECH

Governed automation
for everyday business operations.

Seven conversations.
One connected shipment.

ART brings updates, documents and next steps together—
so every change doesn't become another round of calls.

"The load has changed."

One supplier update. Now the packing list and pickup details need to catch up.

ART checks the revision against the shipment and requests what's missing.

"Has the transporter got the new details?"

Sending the revised document
is only half the handoff.

**The relevant change reaches the affected parties.
Their confirmations stay open until there's an answer.**

"Can we still make the cutoff?"

Pickup shifts. The next milestone is now in question.

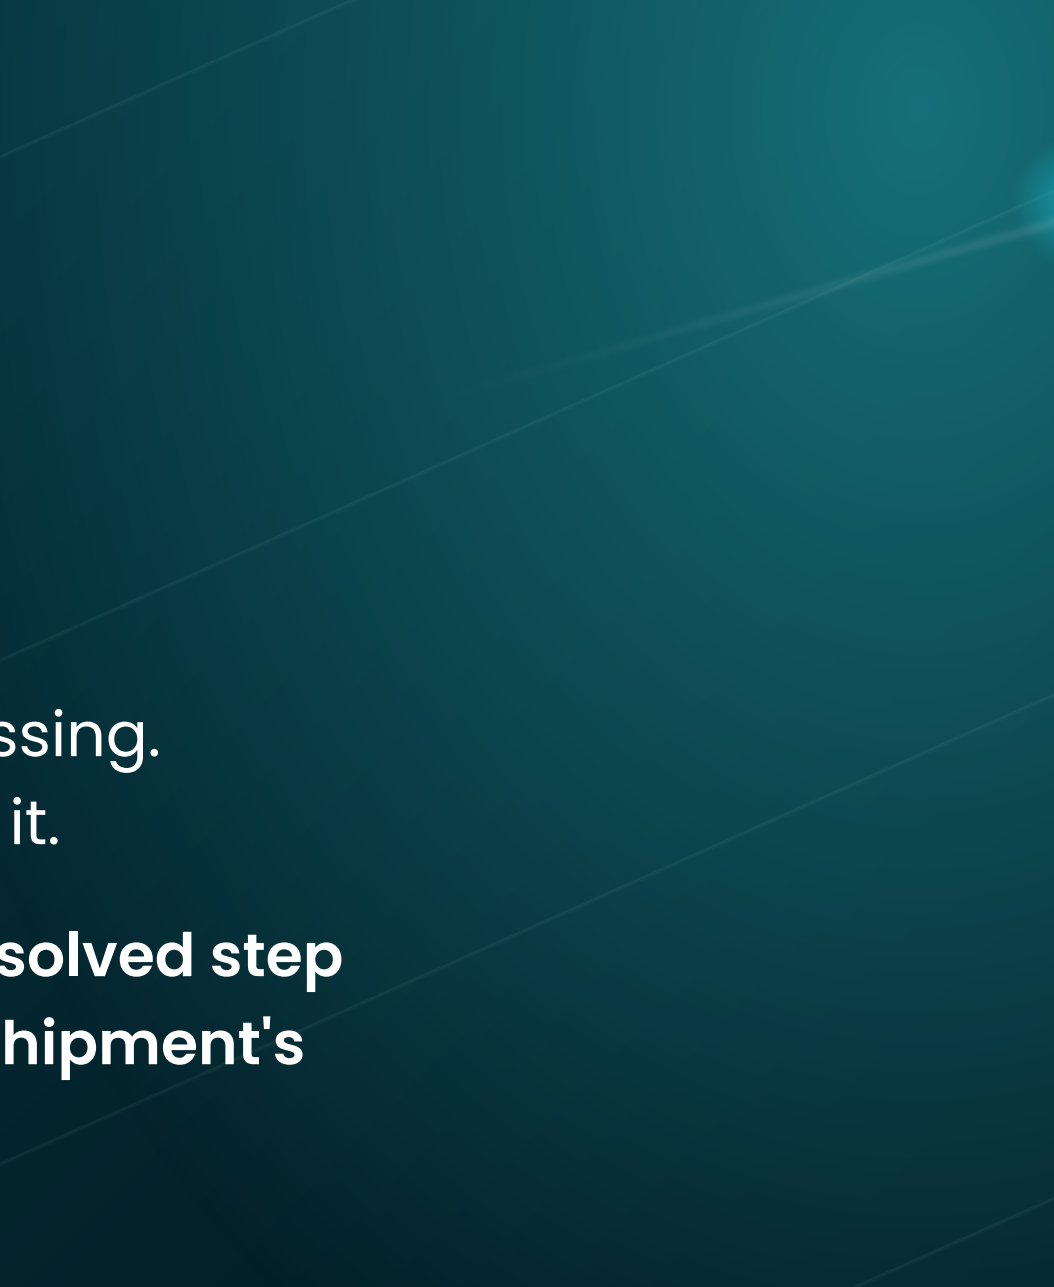

ART checks the knock-on effects and gathers feasible options—connecting the changed timing to what happens next.

Then comes the silence.

One confirmation is still missing.
Everyone else is waiting on it.

ART follows up on that unresolved step and flags when it puts the shipment's next milestone at risk.

The next call should be a decision.

If the revised plan adds cost or changes a commitment, you get the options and their impact together—before it goes ahead.

Routine coordination follows your rules.
Exceptions get your judgment.

A REALTIME TECH

Your job is to move the shipment.
Not carry every conversation.

ART (A Realtime Tech)
connects the follow-through.

DM "CONTAINER"

to explore your shipment workflow.
